7. ISO/IEC 15693-3/Amd.4 Security Framework  
Jose Perez presents WG8 N 2253 = TF3 N 194  
After in depth discussion TF3 agrees that:  
The interface commands of the security framework shall be specified in Amd.4 with dedicated op codes from the range of free optional command codes

The concept of the two timing options ([synchronous](#) and [asynchronous response triggered by the VICC](#)) is basically agreed and may be complemented with specific protocol options.

Whether or not a response buffer should be specified will depend on the requirements for the CHALLENGE command.

Yoshiaki Kaneko presents WG8 N 2254 = TF3 N 195

Whether or not a maximum number of barker codes need to be specified should be investigated further and discussed with security experts

Franz Amtmann presents WG8 N 2251 = TF3 N 192

Franz proposes to specify the security framework in two steps in order to get to the market quickly with a tag authentication amendment only. No immediate consensus was reached.

The need if and how a change of the 15693 state diagram should be done is discussed but may depend on the decision whether all command codes are implemented in one shot or in 2 steps.
